THE MONARCH PERFECTION FEED MIXER

The Photo shows the Monarch Mixer at work on a leading dairy in North Carolina. The man is in position to shove the feed, which has been previously spread in the bin, into the hopper of the machine. There it is thoroughly mixed and sifted. The mixture is forced over the powerful magnet - (shown at the lower front of the mixer) and pieces of wire, nails, and other metal parts are drawn out. Notice the layers of different feeds in the bin.

THE MONARCH MIXER IS YOUR COW INSURANCE.
